

CYBERSECURITY INCIDENT INVESTIGATION & REMEDIATION REPORT

Incident ID:	06ed45f0-f27e-479c-a543-e7a0dbf557f6	Severity Level:	CRITICAL (Score: 85/100)
Threat Pattern:	repeated_failed_login privileged_command_post_login login_success_after_failures	Source IP:	198.51.100.25
Target Asset:	Multiple	MITRE ATT&CK::	T1110, T1078, T1548

1. Executive Summary

The LOGSECURITY SIEM platform correlated 12 security log events from IP address 198.51.100.25 matching pattern 'repeated_failed_login | privileged_command_post_login | login_success_after_failures' with an overall risk score of 85/100 (CRITICAL level). Immediate isolation of the source IP and credential rotation are advised.

2. Technical Analysis & AI Explanation

Risk-score explanation (85 / 100 - CRITICAL) -

3. Log Evidence Summary

Correlated 9 flags involving 3 patterns.

4. Recommended Action Plan & Remediation

[Action 1]	1. Implement multi-factor authentication (MFA) and enforce account lockout policies - block repeated login attempts (T1110) and prevent attackers from using stolen credentials (T1078).
[Action 2]	2. Audit and harden privileged accounts - review permissions, enforce least-privilege, and enable privileged-access management to stop unauthorized privilege escalation (T1548).
[Action 3]	3. Deploy real-time monitoring and automated response -
